The perfect finish every time

Kelly Prickle Chain is made from 20mm chain with 20mm wear resistant steel rods welded through each link.

This creates 4 spikes per link or 132 spikes per metre of coverage, roughly double any other prickly chain on the market.

The unique design of the spikes make the Kelly Prickle Chain extremely effective at leveling soil and incorporating pre-emergent herbicides while at the same time being self cleaning.

As the chain rolls it gently packs the soil giving excellent seed-soil contact, promoting seed germination.

Fitted to your Kelly Diamond Harrow or Kelly Prickle Chain Modules the Kelly Prickle Chain is the ideal finishing tool.
